Summary

Software Engineer II / Java Cloud Services Engineer with 4+ years delivering mission-critical enterprise services and cloud integrations across regulated healthcare and automotive products, including 50K+ daily requests under a 99.99% SLA.

Delivery scope: Translates customer and product requirements into implementation tasks and component designs, then carries changes through Java/API and data integration, testing, reviews, documentation, release validation, and live-site support.

Engineering approach: Designs explicit service and security boundaries, failure behavior, and telemetry; uses production evidence and human-validated AI assistance to improve reliability, maintainability, and engineering quality.

Working style: Takes accountable ownership, communicates risks and trade-offs, seeks and shares feedback across disciplines, and raises team effectiveness through design discussions, code reviews, reusable documentation, and mentoring.

Technical Skills

Java/Distributed Services: Java 8/11, Core Java, OOP, Collections, Streams, Spring Framework/MVC, REST/SOAP APIs, Java EE/J2EE, Hibernate/HQL, JDBC/OJDBC, enterprise SOA, distributed-service integration, asynchronous messaging.

Cloud/Operations: Azure Service Bus, Azure Relay, Azure Functions, JMS (professional); AWS S3/Lambda/EFS/ECS/RDS, Docker, Terraform, CloudWatch (project); live-site support, telemetry, monitoring, diagnostics, root-cause analysis.

Security/Data/Quality: Secure dependency modernization, API security boundaries, regulated-data context, Oracle, DB2, PostgreSQL (project/training), software/data modeling (coursework); JUnit/JUnit4, integration testing, SoapUI, Postman.

AI-Assisted Delivery (projects): Codex, GitHub Copilot, human-in-the-loop review, AI-assisted debugging/testing/documentation, build and runtime validation; Responsible AI and accessibility (knowledge).

Engineering Delivery: Jenkins, Maven, IBM UrbanCode Deploy, GitLab CI/CD, Git, GitHub Actions, Agile/Scrum, architecture and code reviews, implementation planning, technical documentation, mentoring.

Work Experience

NTT Data, Bengaluru, India

Software Developer, Aug 2022 - Aug 2024

- Developed and maintained **Java 8/11, Spring Framework/JAX-WS, and REST/SOAP** healthcare payer services on IBM WebSphere, supporting **50K+ daily requests at 99.99% SLA availability**.
- Integrated Azure Relay, Azure Service Bus, Azure Functions, JMS, and synchronous downstream REST services with explicit timeout and partial-failure behavior across enterprise service flows.
- Integrated an AOP-based monitoring library that propagated correlation IDs and captured **latency, success/failure, and request-volume telemetry** for service-health monitoring and diagnosis.
- Supported live-site root-cause analysis of a WebSphere memory/resource-retention incident through code-path review, mitigation strategy, and rolling-restart validation across four load-balanced production nodes.
- **Led a security-review-driven Log4j2 migration**, owning the PoC, dependency and configuration decisions, preservation of production log contracts, reusable documentation, code reviews, and rollout coordination.
- Integrated Java services with Oracle through OJDBC, consuming established views and PL/SQL procedures while applying member/provider rules and validating downstream data propagation.
- Coordinated requirements, implementation, JUnit/SoapUI testing, peer reviews, Jenkins/Maven/UrbanCode workflows, release checks, documentation, and go/no-go or rollback recommendations.

Capgemini, Mumbai, India

Senior Analyst, Jul 2020 - Aug 2022

- Developed and supported a Java EE/J2EE, JSF, Hibernate/HQL application on Oracle WebLogic with DB2 for Mercedes/Daimler Vans configuration, recommendation, and ordering workflows.
- Integrated a Python prediction service through asynchronous Java REST requests and callbacks, retaining deterministic Java validation before recommendations reached dealer users.
- **Reduced VIN repeat-configuration API latency from 60+ seconds to 10–20 seconds** through set-based HQL/DB2 mapping while retaining authoritative business rules in Java.
- Diagnosed cross-system issues across Python output, Java validation logs, API behavior, and DB2 reference data; used Postman and production logs to verify corrections.
- Supported Jenkins/GitLab CI/CD, Git code reviews, JUnit4 testing, Agile delivery, and documentation; mentored junior developers through walkthroughs, debugging, and reviews.

Capgemini, Mumbai, India

Analyst Trainee, Jan 2020 - Jun 2020

- Built Java Spring/Spring MVC, Angular, and PostgreSQL training applications with authentication, email/OTP login, CRUD, balances, transactions, and profile workflows.

Selected Projects

Privacy-Oriented AI Email Client - Graduate Capstone

- Built email summarization, classification, and reply-support workflows using **PyTorch, Hugging Face Transformers, T5, PEFT/LoRA, and ROUGE**, exposed through a FastAPI model service and React/TypeScript client.
- Implemented per-user adapter loading and lifecycle controls, MinIO model artifacts, and Prometheus diagnostics; evaluated model outputs using ROUGE-backed project measurements.

Resume Corpus - AI-Assisted Engineering Workflow

- Directed and validated Codex/GitHub Copilot-assisted changes through evidence constraints, reusable instructions, deterministic validators, regression cases, build/parse checks, and human acceptance gates.

AWS Automated Spark Pipeline

GitHub

- Provisioned an event-driven S3, Lambda, EFS, ECS, RDS PostgreSQL, VPC/IAM, Docker, Terraform, and CloudWatch pipeline that processed an 8GB+ dataset with checkpoints for restart recovery.

Education

Central Michigan University, Mount Pleasant, MI, USA

Aug 2024 - Dec 2025

Master of Science in Computer Science, GPA: 3.87/4.0

Lovely Professional University, Punjab, India

Aug 2016 - May 2020

Bachelor of Technology in Computer Science and Engineering, CGPA: 8.02/10

Certifications

Microsoft Certified: Azure Fundamentals | Azure Developer Associate | Azure Data Engineer Associate
