Summary

Java Backend / Application Engineer with 4.6+ years developing and modernizing multi-layer enterprise applications across **healthcare payer integration** and **automotive configuration products**.

Delivery scope: Converts stakeholder requirements into Java/Spring features and bug fixes, REST/SOAP integrations, SQL-backed workflows, unit and integration tests, release validation, and production support.

Engineering approach: Applies object-oriented and layered design, preserves authoritative business rules, improves set-based data access, and traces failures across JVM, application-server, database, messaging, and downstream-service boundaries.

Working style: Collaborates with engineering, QA, database, deployment, vendor, and business-facing teams; communicates technical risks, documents repeatable changes, reviews code, and mentors developers.

Technical Skills

Core Java & Design: Java 8/11, Core Java, object-oriented programming, layered/MVC design patterns, exception handling.

Backend & APIs: Spring Framework, Spring MVC, Java EE/J2EE, EJB, JSF, RESTful APIs, SOAP web services, JAX-WS, HTTP, JSON, XML, Hibernate/HQL, JDBC/OJDBC.

Databases & Integration: SQL, Oracle, IBM DB2; PostgreSQL (project/training); JMS, Azure Service Bus, Azure Relay, Azure Functions, IBM WebSphere, Oracle WebLogic.

Build, Test & Delivery: Maven, Jenkins, IBM UrbanCode, GitLab CI/CD, Git, JIRA; JUnit/JUnit4, unit testing, integration testing, SoapUI, Postman, Log4j2, Agile/Scrum.

Work Experience

NTT Data, Bengaluru, India

Software Developer, Aug 2022 - Aug 2024

- Developed, enhanced, and maintained **Java 8/11, JAX-WS/Spring, and REST/SOAP** healthcare services on IBM WebSphere, supporting **50K+ daily requests at 99.99% SLA availability**.
- Integrated multi-system flows across **Azure Service Bus, Azure Relay, Azure Functions, and JMS**, synchronous REST dependencies, and Oracle/OJDBC processing with explicit timeout and partial-failure handling.
- Integrated Java services with Oracle views and PL/SQL procedures through OJDBC, applying service-layer member/provider rules while coordinating database-contract changes with the database team.
- **Led a project-wide Log4j2 migration**, owning the initial PoC, preserving production logging contracts, documenting technical changes and limitations, and reviewing the team rollout.
- Integrated an AOP-based monitoring library that propagated correlation IDs and captured latency, success/failure, and request-volume telemetry for production troubleshooting.
- Supported root-cause analysis of a **WebSphere JVM resource-retention incident**, contributing Java/REST code-path review, mitigation planning, and rolling-restart validation while maintaining service availability.
- Built and validated changes with Maven, Jenkins, JUnit, SoapUI, and IBM UrbanCode; performed post-deployment checks and contributed go/no-go or rollback recommendations with engineering, QA, deployment, and operations teams.

Capgemini, Mumbai, India

Senior Analyst, Jul 2020 - Aug 2022

- Developed and supported a **Java EE/J2EE, JSF, Hibernate/HQL** application on Oracle WebLogic with DB2 and layered UI, service, DAO, and DTO components for Mercedes/Daimler Vans configuration workflows.
- Integrated an asynchronous Python prediction workflow with Java HTTP services and callbacks, then enforced deterministic option and package rules before recommendations reached dealer users.

- **Reduced VIN repeat-configuration API latency from 60+ seconds to 10-20 seconds** by moving stable mapping logic into set-based HQL/DB2 CASE processing while retaining business validation in Java.
- Diagnosed defects across Python output, Java logs, and DB2 reference data; used Postman and production logs to verify fixes and performance across client-side, server-side, and database boundaries.
- Supported Jenkins/GitLab CI/CD, Maven builds, JUnit4 tests, Agile/JIRA delivery, Git-based code reviews, technical documentation, and junior-developer mentoring.

Capgemini, Mumbai, India

Analyst Trainee, Jan 2020 - Jun 2020

- Built Java Spring/Spring MVC, Angular, and PostgreSQL modules for fitness-club and digital-wallet applications, implementing authentication, email/OTP login, CRUD, balances, transactions, and profile workflows.

Selected Projects

AWS Automated Spark Pipeline (Master's Coursework)

github.com/preferablehuman/AWS-automated-spark-pipeline

- Built an event-driven pipeline where S3 triggers Lambda staging to EFS, an ECS-hosted Docker/Spark workload processes micro-batches, and results persist to **PostgreSQL** over JDBC; provisioned the environment with Terraform for an **8GB+ dataset**.

BookStore Full-Stack Practice Project

github.com/preferablehuman/BookStore

- Built a Java and Angular application with REST-style APIs and object-oriented components, reinforcing client-side/server-side integration and full-stack application design.

Education

Central Michigan University, Mount Pleasant, MI, USA

Aug 2024 - Dec 2025

Master of Science in Computer Science, GPA: 3.87/4.0

Lovely Professional University, Punjab, India

Aug 2016 - May 2020

Bachelor of Technology in Computer Science and Engineering, CGPA: 8.02/10

Certifications

Microsoft Certified: Azure Fundamentals | Azure Developer Associate | Azure Data Engineer Associate
