Summary

Enterprise Java Developer with 4.6+ years building and modernizing backend applications across healthcare payer integrations and automotive configuration products, including services handling **50K+ daily requests at 99.99% SLA availability**.

Delivery scope: Translates product and business requirements into Java/Spring services, REST/SOAP contracts, persistence and messaging integrations, automated tests, CI/CD releases, and production support.

Engineering approach: Designs maintainable service boundaries and improves performance, reliability, security-boundary handling, and observability through explicit failure paths, correlation telemetry, and query tuning.

Working style: Solves ambiguous integration problems through focused prototypes and cross-team analysis; communicates trade-offs, documents reusable solutions, reviews code, and mentors developers.

Technical Skills

Enterprise Java: Java 8/11, Spring Boot/Framework/MVC, Java EE/J2EE, OOP, MVC, design patterns, multi-tier architecture; data structures, algorithms, multithreading and concurrency fundamentals.

APIs & Persistence: REST/SOAP APIs, JAX-WS, HTTP, JSON, XML, AJAX, Microservices/SOA, JDBC/OJDBC, JPA, Hibernate/HQL; Oracle and DB2, PostgreSQL (project/training).

Platforms, Security & Messaging: IBM WebSphere, Oracle WebLogic, API Gateway security boundary, service authorization, JMS, Azure Service Bus, Azure Relay, Azure Functions.

Cloud & DevOps: AWS, Docker, Terraform and CloudWatch (projects); Azure integration; Kubernetes (knowledge/project exposure); Maven, Jenkins, GitLab CI/CD, IBM UrbanCode, Git, JUnit/JUnit4, SoapUI, Postman, Linux familiarity, Agile/Scrum.

Work Experience

NTT Data, Bengaluru, India

Software Developer, Aug 2022 - Aug 2024

- Developed and maintained **Java 8/11, JAX-WS/Spring, and REST/SOAP** healthcare integration services on IBM WebSphere, supporting **50K+ daily requests at 99.99% SLA availability**.
- Integrated service flows across **Azure Service Bus, Azure Relay, Azure Functions, and JMS**, synchronous REST dependencies, and Oracle/OJDBC processing with explicit timeout and partial-failure handling.
- Integrated Java services with Oracle views and PL/SQL procedures through OJDBC while implementing service-layer member/provider rules and preserving established database ownership boundaries.
- Worked behind an enterprise API Gateway security boundary, consuming authenticated caller identity and enforcing service-level authorization rules for external integration flows.
- **Led a project-wide Log4j2 migration**, owning the initial PoC, preserving production logging contracts, documenting a repeatable upgrade path, and reviewing the team rollout.
- Integrated an AOP-based monitoring library that propagated correlation IDs and captured latency, success/failure, and request-volume telemetry across services.
- Supported Maven/Jenkins/IBM UrbanCode delivery, JUnit/SoapUI testing, production troubleshooting, release documentation, post-deployment validation, and go/no-go or rollback recommendations.

Capgemini, Mumbai, India

Senior Analyst, Jul 2020 - Aug 2022

- Developed and supported a **multi-tier Java EE/J2EE, JSF/AJAX, Hibernate/HQL** application on Oracle WebLogic with DB2 for Mercedes/Daimler Vans product workflows.
- Integrated an asynchronous Python prediction workflow with Java REST APIs and callbacks, then enforced deterministic option and package rules before recommendations reached dealer users.
- **Reduced VIN repeat-configuration API latency from 60+ seconds to 10-20 seconds** through set-based HQL/DB2 processing while retaining authoritative business validation in Java.

- Diagnosed issues across Python output, Java logs, and DB2 data; supported Jenkins/GitLab CI/CD, JUnit4, Git-based code reviews, and **mentored junior developers** through features and production defects.

Capgemini, Mumbai, India

Analyst Trainee, Jan 2020 - Jun 2020

- Built Java Spring/Spring MVC, Angular, and PostgreSQL modules for digital-wallet and fitness-club applications, implementing authentication, REST-style workflows, CRUD, balances, transactions, and profile features.

Selected Projects

AWS Automated Spark Pipeline

github.com/preferablehuman/AWS-automated-spark-pipeline

- Built an event-driven AWS application where **S3 uploads trigger Lambda staging to EFS**, an ECS-hosted Docker/Spark workload processes micro-batches, and results persist to RDS PostgreSQL/JDBC.
- Provisioned VPC, IAM, notifications, Lambda, EFS, ECS, RDS, security groups, and CloudWatch resources with **Terraform**; processed an **8GB+ dataset** and retained checkpoints for restart recovery.

Education

Central Michigan University, Mount Pleasant, MI, USA

Aug 2024 - Dec 2025

Master of Science in Computer Science, GPA: 3.87/4.0

Lovely Professional University, Punjab, India

Aug 2016 - May 2020

Bachelor of Technology in Computer Science and Engineering, CGPA: 8.02/10

Certifications

Microsoft Certified: Azure Fundamentals | Azure Developer Associate | Azure Data Engineer Associate
