Summary

Java Backend Developer with 4.6+ years building and modernizing enterprise applications across healthcare payer integrations and automotive products, including services handling **50K+ daily requests under a 99.99% availability SLA**.

Delivery scope: Converts requirements into Core Java/Spring services, REST/SOAP integrations, Hibernate/SQL persistence, automated tests, CI/CD releases, and production fixes across the software lifecycle.

Engineering approach: Improves performance, reliability, and diagnosability through explicit failure handling, correlation telemetry, cross-layer debugging, and set-based query optimization while preserving authoritative business rules.

Working style: Works independently on owned deliverables and collaborates across engineering, QA, database, deployment, vendor, and business teams; documents solutions, reviews code, and mentors developers.

Technical Skills

Core Java & Enterprise: Java 8/11, Core Java, Java EE/J2EE, OOP, design patterns, multi-tier architecture; multithreading and concurrency (knowledge).

Spring & Services: Spring Framework/MVC, RESTful Web Services, SOAP, JAX-WS, HTTP, JSON, XML, SOA; Spring Boot and microservices architecture (knowledge).

Data & Platforms: Hibernate/HQL, JDBC/OJDBC, Oracle, DB2, PostgreSQL (project/training), SQL query optimization; IBM WebSphere, Oracle WebLogic.

Quality & Delivery: Git, Maven, Jenkins, GitLab CI/CD, IBM UrbanCode, JUnit/JUnit4, integration testing, SoapUI, Postman, Log4j2, production debugging, Agile/Scrum; Docker and AWS (projects).

Work Experience

NTT Data, Bengaluru, India

Software Developer, Aug 2022 - Aug 2024

- Developed and maintained **Java 8/11, JAX-WS/Spring, and REST/SOAP** healthcare integration services on IBM WebSphere, supporting **50K+ daily requests under a 99.99% availability SLA**.
- Integrated synchronous REST dependencies into established SOAP/SOA workflows with explicit timeout and partial-failure handling across member and provider service flows.
- Connected Core Java services to Oracle views and PL/SQL procedures through OJDBC, implementing service-layer rules while preserving database ownership boundaries.
- Integrated flows across Azure Service Bus, Azure Relay, Azure Functions, and JMS and enforced service authorization behind an enterprise API Gateway security boundary.
- **Led a project-wide Log4j2 migration**, owning the initial PoC, preserving production logging contracts, documenting a repeatable upgrade path, and reviewing the team rollout.
- Integrated AOP-based monitoring that propagated correlation IDs and captured latency, success/failure, and request-volume telemetry across service calls.
- Supported root-cause analysis of a WebSphere memory/resource-retention incident through code-path review, mitigation planning, and rolling-restart validation while service availability was maintained.
- Supported Maven/Jenkins/IBM UrbanCode delivery, JUnit/SoapUI testing, production troubleshooting, release documentation, post-deployment validation, and go/no-go or rollback recommendations.

Capgemini, Mumbai, India

Senior Analyst, Jul 2020 - Aug 2022

- Developed and supported a **multi-tier Java EE/J2EE, JSF/AJAX, Hibernate/HQL** application on Oracle WebLogic with DB2 for Mercedes/Daimler Vans configuration and recommendation workflows.
- Integrated an asynchronous Python prediction workflow with Java REST APIs and callbacks, then enforced deterministic option and package rules before recommendations reached dealer users.
- **Reduced VIN repeat-configuration API latency from 60+ seconds to 10–20 seconds** through set-based HQL/DB2 processing while retaining authoritative business validation in Java.
- Diagnosed issues across Python output, Java logs, and DB2 data; supported Jenkins/GitLab CI/CD, JUnit4, Git-based code reviews, and mentored junior developers through features and production defects.

Capgemini, Mumbai, India

Analyst Trainee, Jan 2020 - Jun 2020

- Built Java Spring/Spring MVC, Angular, and PostgreSQL modules for digital-wallet and fitness-club applications, implementing authentication, REST-style workflows, CRUD, balances, transactions, and profile features.

Selected Project

AWS Automated Spark Pipeline

github.com/preferablehuman/AWS-automated-spark-pipeline

- Built an event-driven AWS application where **S3 uploads trigger Lambda staging to EFS**, an ECS-hosted Docker/Spark workload processes micro-batches, and results persist to RDS PostgreSQL/JDBC.
- Provisioned VPC, IAM, notifications, Lambda, EFS, ECS, RDS, security groups, and CloudWatch resources with **Terraform**; processed an **8GB+ dataset** and retained checkpoints for restart recovery.

Education

Central Michigan University, Mount Pleasant, MI, USA

Aug 2024 - Dec 2025

Master of Science in Computer Science, GPA: 3.87/4.0

Lovely Professional University, Punjab, India

Aug 2016 - May 2020

Bachelor of Technology in Computer Science and Engineering, CGPA: 8.02/10

Certifications

Microsoft Certified: Azure Fundamentals | Azure Developer Associate | Azure Data Engineer Associate
