Summary

Java Backend Engineer with 4.6+ years building and modernizing enterprise services across healthcare integrations and automotive product systems, including **Java 11 services handling 50K+ daily requests under a 99.99% availability SLA**.

Delivery scope: Converts requirements into Java/Spring services, REST/SOAP contracts, asynchronous model-service integrations, Hibernate/SQL persistence, automated tests, release validation, and production fixes.

Engineering approach: Improves latency, reliability, and diagnosability through explicit failure handling, correlation telemetry, cross-layer debugging, and set-based query optimization while keeping deterministic business rules authoritative.

Working style: Owns deliverables across implementation and support, collaborates with engineering, QA, database, deployment, and business teams, and strengthens delivery through documentation, code reviews, and mentoring.

Technical Skills

Java Backend: Java 8/11, Core Java, Java EE/J2EE, OOP, design patterns, multi-tier architecture; multithreading, concurrency, data structures, and algorithms (knowledge).

Spring & APIs: Spring Boot (knowledge), Spring Framework/MVC, REST APIs, SOAP, JAX-WS, HTTP, JSON, XML, SOA; microservices architecture (knowledge).

Data, Messaging & Platforms: Hibernate/HQL, JDBC/OJDBC, Oracle, DB2, PostgreSQL (projects/training), SQL query optimization; JMS, Azure Service Bus, IBM WebSphere, Oracle WebLogic.

Cloud, AI & Delivery: AWS, Docker, Terraform, Spark Structured Streaming, FastAPI, PyTorch, T5/LoRA, Prometheus (projects); Git, Maven, Jenkins, GitLab CI/CD, IBM UrbanCode, JUnit/JUnit4, SoapUI, Postman, Log4j2, Agile/Scrum.

Work Experience

NTT Data, Bengaluru, India

Software Developer, Aug 2022 - Aug 2024

- Developed and maintained **Java 8/11, JAX-WS/Spring, and REST/SOAP** healthcare integration services on IBM WebSphere, supporting **50K+ daily requests under a 99.99% availability SLA**.
- Integrated synchronous REST dependencies into established SOAP/SOA workflows with explicit timeout and partial-failure handling across member and provider data flows.
- Connected Java services to Oracle views and PL/SQL procedures through OJDBC, implementing service-layer rules while preserving database ownership boundaries.
- Integrated flows across Azure Service Bus, Azure Relay, Azure Functions, and JMS and enforced service authorization behind an enterprise API Gateway security boundary.
- **Led a project-wide Log4j2 migration**, owning the initial PoC, preserving production logging contracts, documenting a repeatable upgrade path, and reviewing the team rollout.
- Integrated AOP-based monitoring that propagated correlation IDs and captured latency, success/failure, and request-volume telemetry across service calls.
- Supported root-cause analysis of a WebSphere memory/resource-retention incident through code-path review, mitigation planning, and rolling-restart validation while service availability was maintained.
- Supported Maven/Jenkins/IBM UrbanCode delivery, JUnit/SoapUI testing, production troubleshooting, release documentation, post-deployment validation, and go/no-go or rollback recommendations.

Capgemini, Mumbai, India

Senior Analyst, Jul 2020 - Aug 2022

- Developed and supported a **multi-tier Java EE/J2EE, JSF/AJAX, Hibernate/HQL** application on Oracle WebLogic with DB2 for Mercedes/Daimler Vans configuration and recommendation workflows.
- Integrated a **Python prediction service** through asynchronous Java REST requests and callbacks, then applied deterministic option and package validation before recommendations reached dealer users.
- **Reduced VIN repeat-configuration API latency from 60+ seconds to 10–20 seconds** through set-based HQL/DB2 processing while retaining authoritative business validation in Java.
- Diagnosed failures across Python-service output, Java validation logs, and DB2 reference data; supported Jenkins/GitLab CI/CD, JUnit4, Git-based code reviews, and mentored developers through features and production defects.

Capgemini, Mumbai, India

Analyst Trainee, Jan 2020 - Jun 2020

- Built Java Spring/Spring MVC, Angular, and PostgreSQL modules for digital-wallet and fitness-club applications, implementing authentication, REST-style workflows, CRUD, balances, transactions, and profile features.

Selected Projects

AWS Automated Spark Pipeline

github.com/preferablehuman/AWS-automated-spark-pipeline

- Built an event-driven AWS application where **S3 uploads trigger Lambda staging to EFS**, an ECS-hosted Docker/Spark Structured Streaming workload processes micro-batches, and results persist to RDS PostgreSQL/JDBC.
- Provisioned VPC, IAM, Lambda, EFS, ECS, RDS, security groups, and CloudWatch with **Terraform**; processed an **8GB+ dataset** and retained checkpoints for restart recovery.

Privacy-Preserving AI Email Client

github.com/preferablehuman

- Implemented a project-based **FastAPI model service** for T5/PEFT-LoRA summarization and classification, with per-user adapter lifecycle controls, MinIO model artifacts, Prometheus diagnostics, and ROUGE evaluation.

Education

Central Michigan University, Mount Pleasant, MI, USA

Aug 2024 - Dec 2025

Master of Science in Computer Science, GPA: 3.87/4.0

Lovely Professional University, Punjab, India

Aug 2016 - May 2020

Bachelor of Technology in Computer Science and Engineering, CGPA: 8.02/10

Certifications

Microsoft Certified: Azure Fundamentals | Azure Developer Associate | Azure Data Engineer Associate
