Summary

Java Backend / MTS-II Engineer with 4+ years building and maintaining high-availability enterprise services across healthcare payer and automotive products using Java, Spring, REST/SOAP APIs, SQL, messaging, and CI/CD.

Delivery scope: Translates requirements into component designs and maintainable code, then carries changes through API/database integration, unit and integration testing, code review, release validation, monitoring, and production support.

Engineering approach: Designs explicit service boundaries and failure behavior, measures latency and resource use, and applies set-based data access and observable request flows to improve reliability, scalability, and performance.

Working style: Takes ownership with transparent risk communication, collaborates across architecture, QA, database, deployment, vendor, and operations teams, and raises quality through reviews, reusable documentation, and mentoring.

Technical Skills

Java/API Engineering: Java 8/11, Core Java, OOP, Collections, Streams, Spring Framework, Spring MVC, REST/SOAP APIs, Java EE/J2EE, Hibernate/HQL, JDBC/OJDBC; Spring Boot and microservices architecture (knowledge).

Architecture/Quality: Enterprise SOA and distributed-service integration, component design, API integration, performance tuning, failure handling, observability, root-cause analysis, data structures and algorithms (project/coursework).

Cloud/Containers: AWS S3, Lambda, EFS, ECS/Fargate, RDS, CloudWatch, IAM, VPC, Docker, Terraform (project); Azure Service Bus, Azure Relay, Azure Functions, JMS (professional).

Data/Delivery: Oracle, DB2, PostgreSQL (project/training); Jenkins, Maven, IBM UrbanCode Deploy, GitLab CI/CD, Git, GitHub Actions; JUnit/JUnit4, integration testing, SoapUI, Postman, Log4j2, Agile/Scrum.

Work Experience

NTT Data, Bengaluru, India

Software Developer, Aug 2022 - Aug 2024

- Developed and maintained **Java 8/11, Spring Framework/JAX-WS, and REST/SOAP** healthcare payer services on IBM WebSphere, supporting **50K+ daily requests at 99.99% SLA availability**.
- Integrated services across **Azure Relay, Azure Service Bus, Azure Functions, and JMS**, plus synchronous downstream REST dependencies with explicit timeout and partial-failure behavior.
- Integrated Java services with **Oracle through OJDBC**, consuming established views and PL/SQL procedures while applying member/provider rules and validating downstream data propagation.
- **Led a project-wide Log4j2 migration**, owning the PoC, dependency and configuration decisions, preservation of production log contracts, reusable documentation, code reviews, and coordinated rollout.
- Integrated AOP-based service monitoring that propagated correlation IDs and captured **latency, success/failure, and request-volume telemetry** for operational diagnosis.
- Supported root-cause analysis of a WebSphere memory/resource-retention incident through code-path review, mitigation strategy, and rolling-restart validation across four load-balanced production nodes.
- Coordinated requirement clarification, implementation, JUnit/SoapUI testing, reviews, Jenkins/Maven/IBM UrbanCode workflows, post-release checks, and go/no-go or rollback recommendations.

Capgemini, Mumbai, India

Senior Analyst, Jul 2020 - Aug 2022

- Developed and supported a Java EE/J2EE, JSF, Hibernate/HQL application on Oracle WebLogic with DB2 for Mercedes/Daimler Vans configuration, recommendation, and ordering workflows.
- Integrated a Python prediction service through asynchronous Java REST requests and callbacks, then enforced authoritative option/package rules before recommendations reached dealer users.

- **Reduced VIN repeat-configuration API latency from 60+ seconds to 10–20 seconds** by moving stable option-code mapping into set-based HQL/DB2 expressions while retaining business validation in Java.
- Diagnosed defects across Python output, Java validation logs, REST behavior, and DB2 reference data; used Postman and production logs to isolate failures and verify performance.
- Supported Jenkins/GitLab CI/CD, Git code reviews, JUnit4 testing, Agile delivery, and documentation; **mentored junior developers** through walkthroughs, debugging, and reviews.

Capgemini, Mumbai, India

Analyst Trainee, Jan 2020 - Jun 2020

- Built Java Spring/Spring MVC, Angular, and PostgreSQL training applications with authentication, email/OTP login, CRUD, balances, transactions, and profile workflows.

Projects

AWS Automated Spark Pipeline / NYU Taxi Platform

GitHub

- Designed an event-driven pipeline where S3 triggers Lambda staging to EFS, a **Docker-packaged Spark Structured Streaming workload runs on ECS**, and processed data persists to RDS PostgreSQL over JDBC.
- Provisioned AWS networking and services with Terraform; processed an **8GB+ dataset**, persisted checkpoints for restart recovery, and exposed execution state through CloudWatch logging.

CodingHelper - Java/Python DSA Learning Platform

- Built a React/TypeScript and FastAPI application using LangChain, Ollama, RAG, Qdrant, and PostgreSQL to generate and retrieve structured Java/Python data-structure and algorithm solution ladders.
- Implemented isolated Java/Python execution with repair, rejection, and promotion gates; generated implementations must pass bounded asserting tests before display or reuse.

Education

Central Michigan University, Mount Pleasant, MI, USA

Aug 2024 - Dec 2025

Master of Science in Computer Science, GPA: 3.87/4.0

Lovely Professional University, Punjab, India

Aug 2016 - May 2020

Bachelor of Technology in Computer Science and Engineering, CGPA: 8.02/10

Certifications

Microsoft Certified: Azure Fundamentals | Azure Developer Associate | Azure Data Engineer Associate
