# Kunal Maheshwari

Java Developer | Spring Boot | REST APIs | SQL | Backend  
Engineering

Mount Pleasant, Michigan, United States

## Summary

Relentlessly curious software developer and data engineer with 4+ years of experience delivering scalable backend systems, data pipelines, and cloud-native solutions for enterprise clients across healthcare and automotive domains. Currently pursuing an MS in Computer Science at Central Michigan University, with a focus on cloud computing, data engineering, and large-scale analytics.

My graduate work reflects this passion — from building a cloud-integrated video detection pipeline for ecological tracking to developing a full-stack analytics platform to analyze U.S. election data trends. I believe in code that performs, scales, and informs.

---

## Experience

### NTT DATA

Software Development Analyst

August 2022 - July 2024 (2 years)

Bangalore Urban, Karnataka, India

- Developed and maintained high-performance SOAP and REST microservices using Java 8/11, Spring Boot, and Azure Functions, supporting 50,000+ daily API requests with 99.99% SLA uptime
- Implemented comprehensive CI/CD pipelines using Jenkins, Maven, and Azure DevOps for automated builds, testing, and deployments to Azure Cloud and Oracle WebLogic servers
- Applied software engineering best practices including unit testing with JUnit, code reviews, version control with Git/SVN, and Test-Driven Development (TDD) methodologies
- Reduced system issue resolution time by 20% through collaborative debugging, performance optimization, and implementation of robust error handling and logging mechanisms
- Successfully migrated legacy logging systems to log4j 2.x, improving application performance and monitoring capabilities across multiple microservices

- Led EDX platform upgrade project, reducing delivery time by 50% through expertise in Java application architecture, JAR dependency management, and fault analysis
- Collaborated with cross-functional teams using Agile and Scrum methodologies to deliver healthcare insurance solutions meeting FHIR standards and regulatory requirements

## Capgemini

2 years 1 month

### Senior Analyst

October 2021 - July 2022 (10 months)

Mumbai, Maharashtra, India

- Designed and developed Java/EJB enterprise applications and web services for automotive industry clients, enhancing vehicle configuration prediction systems
- Achieved 90% performance improvement through SQL query optimization, database tuning, and legacy code modernization using Java 8 features and design patterns
- Implemented Continuous Integration and Continuous Deployment (CI/CD) pipelines using Jenkins, GitLab, and automated testing frameworks for faster releases
- Participated in Agile development sprints, conducting code reviews, pair programming, and technical documentation to ensure software quality and team collaboration
- Developed RESTful web services for system integration, enabling seamless data exchange between multiple enterprise applications

### Analyst

July 2020 - October 2021 (1 year 4 months)

Mumbai, Maharashtra, India

- Maintained high-availability enterprise applications ensuring 99%+ uptime through proactive monitoring, debugging, and performance optimization
- Streamlined SQL data pipelines and database operations, improving query performance by 10% and enhancing data integrity through comprehensive code reviews
- Implemented unit testing strategies using JUnit4, achieving 99% code coverage and significantly improving software quality and maintainability
- Contributed to release planning, feature development, and defect resolution using JIRA for project tracking and Agile methodologies for team coordination

Capgemini

Trainee

January 2020 - May 2020 (5 months)

Jalandhar, Punjab, India

---

## Education

Central Michigan University

Master of Science - MS, Computer Science · (August 2024 - December 2025)

Lovely Professional University

Bachelor of Technology - BTech, Computer Science · (2016 - 2020)

St. Paul's Senior Secondary School

10+2 , science with maths · (2000 - 2016)
