## Summary

---

**Java Backend Engineer** with 4.6+ years building, modernizing, and supporting enterprise services across healthcare payer and automotive products, including integrations handling **50K+ daily requests at 99.99% SLA availability**.

**Delivery scope:** Translates requirements into Java/Spring services, REST/SOAP and messaging integrations, database changes, automated tests, CI/CD release validation, and production support.

**Engineering approach:** Improves performance, scalability, reliability, and observability through explicit failure handling, asynchronous integration patterns, correlation telemetry, query tuning, and cross-system root-cause analysis.

**Working style:** Owns contained technical initiatives, communicates design and operational trade-offs, collaborates across engineering and business teams, reviews code, documents standards, and mentors developers.

## Technical Skills

---

**Java Backend:** Java 8/11, Spring Boot/Framework/MVC, Java EE/J2EE, REST/SOAP APIs, JAX-WS, Microservices/SOA, Hibernate/HQL, JDBC/OJDBC, OOP and design patterns.

**Data & Messaging:** SQL, Oracle, DB2; PostgreSQL (project/training); JMS, Azure Service Bus, asynchronous APIs/callbacks; Kafka (hands-on project exposure).

**Cloud, Containers & Delivery:** AWS S3, Lambda, EFS, ECS, RDS, CloudWatch, IAM, VPC; Docker and Terraform (projects); Kubernetes (knowledge/project exposure); Maven, Jenkins, GitLab CI/CD, IBM UrbanCode, Git.

**Quality & Operations:** JUnit/JUnit4, integration testing, SoapUI, Postman, Log4j2, correlation-ID telemetry, production support, performance tuning, incident investigation, code reviews; data structures, algorithms, and concurrency fundamentals.

## Work Experience

---

**NTT Data**, Bengaluru, India

*Software Developer, Aug 2022 - Aug 2024*

- Developed and maintained **Java 8/11, JAX-WS/Spring, and REST/SOAP** healthcare integration services on IBM WebSphere, supporting **50K+ daily requests at 99.99% SLA availability**.
- Integrated asynchronous service flows across **Azure Service Bus, Azure Relay, Azure Functions, and JMS**, plus synchronous REST dependencies and Oracle/OJDBC processing with explicit timeout and partial-failure handling.
- **Led a project-wide Log4j2 migration**, owning the PoC, preserving production logging contracts, documenting a repeatable upgrade path, reviewing implementation changes, and tracking the team rollout.
- Integrated an AOP-based monitoring library that propagated correlation IDs and captured latency, success/failure, and request-volume telemetry across services.
- Troubleshoot production issues across Java services, WebSphere, messaging, databases, and downstream systems; contributed code-path analysis, mitigation planning, rolling-restart validation, and release recommendations.
- Supported Maven/Jenkins/IBM UrbanCode delivery, JUnit/SoapUI testing, release documentation, post-deployment checks, and go/no-go or rollback recommendations with engineering, QA, deployment, and operations teams.

Capgemini, Mumbai, India

Senior Analyst, Jul 2020 - Aug 2022

- Developed and supported a **Java EE/J2EE, JSF, Hibernate/HQL** application on Oracle WebLogic with DB2 for Mercedes/Daimler Vans configuration, recommendation, and ordering workflows.
- Integrated an asynchronous Python prediction workflow with Java APIs and callbacks, then enforced deterministic option and package rules before recommendations reached dealer users.
- **Reduced VIN repeat-configuration API latency from 60+ seconds to 10–20 seconds** through set-based HQL/DB2 processing while retaining authoritative business validation in Java.
- Diagnosed issues across Python output, Java logs, and DB2 reference data; supported Jenkins/GitLab CI/CD, JUnit4, Git-based code reviews, and **mentored junior developers** through features and production defects.

Capgemini, Mumbai, India

Analyst Trainee, Jan 2020 - Jun 2020

- Built Java Spring/Spring MVC, Angular, and PostgreSQL modules for digital-wallet and fitness-club applications, implementing authentication, CRUD, balances, transactions, and profile workflows.

## Selected Projects

### AWS Automated Spark Pipeline

[github.com/preferablehuman/AWS-automated-spark-pipeline](https://github.com/preferablehuman/AWS-automated-spark-pipeline)

- Built an event-driven AWS pipeline where **S3 uploads trigger Lambda staging to EFS**, an ECS-hosted Docker/Spark workload processes micro-batches, and results persist to RDS PostgreSQL/JDBC.
- Provisioned VPC, IAM, S3 notifications, Lambda, EFS, ECS, RDS, security groups, and CloudWatch resources with **Terraform**; processed an **8GB+ dataset** and retained EFS checkpoints for restart recovery.

### Privacy-Preserving AI Email Client (Graduate Capstone)

- Built a Dockerized application with a Python/FastAPI model service, MinIO storage, Prometheus metrics, diagnostics, and a React/TypeScript client for summarization and classification workflows.

## Education

Central Michigan University, Mount Pleasant, MI, USA

Aug 2024 - Dec 2025

Master of Science in Computer Science, GPA: 3.87/4.0

Lovely Professional University, Punjab, India

Aug 2016 - May 2020

Bachelor of Technology in Computer Science and Engineering, CGPA: 8.02/10

## Certifications

Microsoft Certified: Azure Fundamentals | Azure Developer Associate | Azure Data Engineer Associate
