Summary

Java Backend / Service-Based Application Engineer with 4.6+ years developing and modernizing enterprise systems across healthcare payer and automotive products, including independently deployed services handling **50K+ daily requests at 99.99% SLA availability**.

Delivery scope: Takes Java/Spring service changes from stakeholder requirements and API/integration design through coding, unit and integration testing, CI/CD validation, documentation, and production support.

Engineering approach: Designs maintainable REST/SOAP components, asynchronous integrations, and explicit failure boundaries; uses observability and code/data-path analysis to improve scalability, performance, and reliability.

Working style: Contributes solutions independently while collaborating across engineering, QA, database, deployment, vendor, and business-facing teams; documents repeatable practices, reviews code, and mentors junior developers.

Technical Skills

Java & Service Architecture: Java 8/11, OOP, Java EE/J2EE, Spring Boot, Spring Framework, Spring MVC, Hibernate/HQL, JDBC/OJDBC; service-based architecture/SOA and microservices concepts.

APIs, Distributed Integration & Messaging: REST/SOAP APIs, JAX-WS, XML, JSON, synchronous/asynchronous services, Azure Service Bus, Azure Relay, Azure Functions, JMS queues/topics, timeout and partial-failure handling.

Data & Performance: SQL, Oracle, PL/SQL procedure integration, DB2, PostgreSQL; database-side set processing, HQL/query optimization, application performance tuning.

Testing, Quality & Delivery: JUnit/JUnit4, integration testing, SoapUI, Postman, Maven, Jenkins, Git/GitLab CI/CD, IBM UrbanCode, code reviews, Agile SDLC, technical and rollout documentation.

Cloud, Containers & Operations: Docker and AWS/Terraform (projects), IBM WebSphere, Oracle WebLogic, Log4j2, correlation IDs, latency/volume telemetry, production troubleshooting.

Work Experience

NTT Data, Bengaluru, India

Software Developer, Aug 2022 - Aug 2024

- Developed and maintained **Java 8/11, JAX-WS/Spring, and REST/SOAP services** on IBM WebSphere for healthcare payer integrations, supporting **50K+ daily requests at 99.99% SLA availability**.
- Implemented synchronous and asynchronous flows across **Azure Service Bus, Azure Relay, Azure Functions, JMS**, and downstream REST services with explicit timeout and partial-failure handling.
- Integrated Java services with Oracle through OJDBC, consuming established views and PL/SQL procedures while applying service-layer member/provider business rules.
- Worked behind an enterprise API Gateway security boundary, consuming authenticated caller identity and enforcing service-level authorization rules in application services.
- Integrated an AOP-based monitoring library that propagated correlation IDs and captured latency, success/failure, and request-volume telemetry; standardized logging through a **project-wide Log4j2 migration** and repeatable rollout documentation.
- Troubleshoot application and WebSphere incidents through code-path and log analysis; coordinated with engineering, QA, database, deployment, vendor, and stakeholder teams on Maven/Jenkins delivery, JUnit/SoapUI testing, release checks, and rollback recommendations.

Capgemini, Mumbai, India

Senior Analyst, Jul 2020 - Aug 2022

- Developed and enhanced a Java EE/J2EE, JSF, Hibernate/HQL application on Oracle WebLogic and DB2 for Mercedes/Daimler Vans configuration, recommendation, and ordering workflows.

- **Reduced a VIN configuration API from 60+ seconds to 10–20 seconds** by moving stable option-code mapping into set-based HQL/DB2 CASE expressions while retaining domain validation in Java.
- Integrated an asynchronous Python prediction workflow with Java services, enforcing deterministic option/package rules before recommendations reached dealer users; diagnosed issues across service logs and DB2 reference data.
- Supported Jenkins/GitLab CI/CD, Git-based reviews, JUnit4, Postman validation, and production debugging; guided junior developers through incremental changes, walkthroughs, and constructive code reviews.

Capgemini, Mumbai, India

Analyst Trainee, Jan 2020 - Jun 2020

- Built Java Spring/Spring MVC, Angular, and PostgreSQL components for fitness-club and digital-wallet training applications, implementing authentication, CRUD, account balances, transactions, and profile workflows.

Projects

AWS Automated Spark Pipeline / NYU Taxi Platform

GitHub

- Built an event-driven pipeline where S3 events trigger Lambda staging to EFS, **Docker-packaged** Spark Structured Streaming processes micro-batches on ECS, and transformed data persists to RDS PostgreSQL over JDBC.
- Provisioned VPC/subnets/NAT, IAM, S3 notifications, Lambda, EFS, ECS, RDS, security groups, and CloudWatch with Terraform; processed an **8GB+ dataset** with persisted checkpoints for restart recovery.

Privacy-Preserving AI Email Client (Graduate Capstone)

- Built a Dockerized email summarization/classification system with independently separated FastAPI model and application-facing services, a React/TypeScript client, MinIO storage, and Prometheus diagnostics.

Education

Central Michigan University, Mount Pleasant, MI, USA

Aug 2024 - Dec 2025

Master of Science in Computer Science, GPA: 3.87/4.0

Lovely Professional University, Punjab, India

Aug 2016 - May 2020

Bachelor of Technology in Computer Science and Engineering, CGPA: 8.02/10

Certifications

Microsoft Certified: Azure Fundamentals | Azure Developer Associate | Azure Data Engineer Associate
