Summary

Java Backend / Platform Integration Engineer with 4.6+ years building and modernizing enterprise services across healthcare payer integrations and automotive products, including high-volume systems and hybrid Azure messaging.

Delivery scope: Takes Java/Spring service changes from requirements and API/integration design through implementation, automated testing, CI/CD release validation, observability, and production support.

Engineering approach: Designs for performance, reliability, and maintainability across REST/SOAP, event-driven messaging, databases, and downstream service boundaries while keeping authoritative business rules explicit.

Working style: Collaborates across engineering, QA, database, deployment, vendor, and business-facing teams while navigating platform constraints and security boundaries; documents repeatable solutions, reviews code, and mentors developers.

Technical Skills

Java Backend: Java 8/11, Spring Framework, Spring MVC, REST/SOAP APIs, JAX-WS, Java EE/J2EE, Hibernate/HQL, JDBC/OJDBC, OOP, service-based architecture/SOA; microservices concepts.

Azure & Event-Driven Integration: Azure Service Bus, Azure Relay, Azure Functions, JMS queues/topics, hybrid-cloud integration, synchronous/asynchronous service flows, API Gateway security boundary.

Data & Performance: SQL, Oracle, DB2, PostgreSQL; database-side set processing, HQL/query optimization, application performance tuning, restart checkpoints (project).

DevOps, Testing & Observability: Jenkins, Maven, IBM UrbanCode, GitLab CI/CD, GitHub Actions, Git; JUnit/JUnit4, integration testing, SoapUI, Postman, Log4j2, correlation IDs, latency/volume telemetry, production troubleshooting.

Cloud Projects: AWS S3, Lambda, EFS, ECS, RDS, CloudWatch, IAM, VPC, Terraform, Docker, Spark Structured Streaming; Azure Fundamentals, Developer, and Data Engineer certifications.

Work Experience

NTT Data, Bengaluru, India

Software Developer, Aug 2022 - Aug 2024

- Developed and maintained **Java 8/11, JAX-WS/Spring, and REST/SOAP services** on IBM WebSphere for healthcare payer integrations, supporting **50K+ daily requests at 99.99% SLA availability**.
- Integrated event-driven and request/response flows across **Azure Service Bus, Azure Relay, Azure Functions, and JMS**, synchronous downstream REST calls, and Oracle/OJDBC processing with explicit timeout and partial-failure handling.
- Worked behind an enterprise API Gateway security boundary, consuming authenticated caller identity and enforcing service-level authorization rules without claiming ownership of gateway authentication.
- Integrated an AOP-based monitoring library that propagated correlation IDs and captured **latency, success/failure, and request-volume telemetry**; standardized service logging through a project-wide Log4j2 migration and repeatable rollout documentation.
- Supported a WebSphere resource-retention incident through code-path analysis, mitigation planning, and rolling-restart validation across load-balanced services while the permanent resource-lifecycle fix was implemented.
- Coordinated with engineering, QA, database, deployment, vendor, and business-facing teams; supported Maven/Jenkins/UrbanCode delivery, JUnit/SoapUI validation, release checks, and go/no-go or rollback recommendations.

Capgemini, Mumbai, India

Senior Analyst, Jul 2020 - Aug 2022

- Developed and supported a Java EE/J2EE, JSF, Hibernate/HQL application on Oracle WebLogic and DB2 for Mercedes/Daimler Vans configuration, recommendation, and ordering workflows.

- **Reduced a VIN configuration API from 60+ seconds to 10–20 seconds** by moving stable option-code mapping into set-based HQL/DB2 CASE expressions while retaining domain validation in Java.
- Integrated an asynchronous Python prediction workflow with Java services, enforcing deterministic option/package rules before recommendations reached dealer users; diagnosed issues across service logs and DB2 reference data.
- Supported Jenkins/GitLab CI/CD, Git-based reviews, JUnit4, Postman validation, and production debugging; mentored junior developers through incremental changes, walkthroughs, and code reviews.

Capgemini, Mumbai, India

Analyst Trainee, Jan 2020 - Jun 2020

- Built Java Spring/Spring MVC, Angular, and PostgreSQL modules for fitness-club and digital-wallet applications, implementing authentication, email/OTP login, CRUD, account balances, transactions, and profile workflows.

Projects

AWS Automated Spark Pipeline / NYU Taxi Platform

GitHub

- Built an **event-driven cloud pipeline** where S3 events trigger Lambda staging to EFS, Docker-packaged Spark Structured Streaming processes micro-batches on ECS, and transformed data persists to RDS PostgreSQL over JDBC.
- Provisioned VPC/subnets/NAT, IAM, S3 notifications, Lambda, EFS, ECS, RDS, security groups, and CloudWatch with Terraform; processed an **8GB+ dataset** with persisted checkpoints for restart recovery.

Privacy-Preserving AI Email Client (Graduate Capstone)

- Built a Dockerized email summarization/classification system with a FastAPI model service, React/TypeScript client, MinIO storage, and Prometheus diagnostics, separating model workflows from application-facing APIs.

Education

Central Michigan University, Mount Pleasant, MI, USA

Aug 2024 - Dec 2025

Master of Science in Computer Science, GPA: 3.87/4.0

Lovely Professional University, Punjab, India

Aug 2016 - May 2020

Bachelor of Technology in Computer Science and Engineering, CGPA: 8.02/10

Certifications

Microsoft Certified: Azure Fundamentals | Azure Developer Associate | Azure Data Engineer Associate
