Summary

Java Full Stack Developer / Java Backend Engineer with 4.6+ years building enterprise healthcare and automotive applications, including services supporting **50K+ daily requests at 99.99% SLA availability**. Returning to professional software engineering after a career break begun in August 2024 to complete an MS in Computer Science and deepen full-stack, cloud, and AI project experience.

Delivery scope: Converts requirements into Java/Spring services, REST/SOAP APIs, Oracle-backed workflows, and web features, carrying changes through design, implementation, testing, CI/CD validation, release support, and maintenance.

Engineering approach: Traces behavior across application, database, messaging, and downstream boundaries to improve performance, reliability, and maintainability while preserving business rules.

Working style: Learns proactively, communicates technical trade-offs, collaborates across technical and non-technical teams, documents repeatable solutions, reviews code, and remains accountable through production validation.

Technical Skills

Languages & Backend: Java 8/11, SQL, Python; JavaScript/TypeScript (projects); Spring Framework/MVC, Spring Boot (knowledge), Java EE/J2EE, Hibernate/HQL, JDBC/OJDBC, REST/SOAP APIs, JAX-WS.

Full Stack: JSF/AJAX; Angular (training delivery); React, TypeScript, Vite, Tailwind CSS, FastAPI (projects); XML/JSON, HTML/CSS.

Databases: Oracle, existing PL/SQL procedures/views integration, DB2, PostgreSQL; RDBMS concepts, SQL/HQL query optimization.

Testing & Delivery: JUnit/JUnit4, integration testing, SoapUI, Postman; Maven, Jenkins, GitLab CI/CD, IBM UrbanCode, Git; Agile/Scrum, code reviews, documentation.

Additional Exposure: AI-assisted development; Docker, AWS, and Azure services through professional integrations or projects.

Work Experience

NTT Data, Bengaluru, India

Software Developer, Aug 2022 - Aug 2024

- Developed and maintained **Java 8/11, Spring/JAX-WS, and REST/SOAP** healthcare integration services on IBM WebSphere, supporting **50K+ daily requests at 99.99% SLA availability**.
- Integrated Java services with **Oracle through OJDBC**, consuming established views and PL/SQL procedures while applying service-layer member and provider business rules.
- Built synchronous and asynchronous integration flows across REST services, XML/JSON, **Azure Relay, Azure Service Bus, Azure Functions, and JMS**, with explicit timeout and partial-failure handling.
- **Led a project-wide Log4j2 migration** from PoC through documented rollout, preserving production logging contracts and reviewing implementation changes with the team.
- Supported JUnit/SoapUI validation, Maven/Jenkins/IBM UrbanCode delivery, production troubleshooting, release documentation, and go/no-go or rollback recommendations.

Capgemini, Mumbai, India

Senior Analyst, Jul 2020 - Aug 2022

- Developed a **Java EE/J2EE, EJB, JSF/AJAX, Hibernate/HQL** enterprise web application on Oracle WebLogic with DB2 for Mercedes/Daimler Vans configuration and ordering workflows.
- Integrated an asynchronous Python prediction workflow with Java services and callbacks, retaining deterministic Java validation before recommendations reached dealer users.
- **Reduced VIN repeat-configuration API latency from 60+ seconds to 10–20 seconds** through set-based HQL/DB2 expressions while retaining business validation in Java.
- Diagnosed issues across Python output, Java logs, and DB2 data; contributed JUnit4 testing, Postman validation, Jenkins/GitLab CI/CD, code reviews, documentation, and junior-developer mentoring.

Capgemini, Mumbai, India

Analyst Trainee, Jan 2020 - Jun 2020

- Built Java Spring/Spring MVC, **Angular**, and PostgreSQL modules for fitness-club and digital-wallet applications, including authentication, CRUD, balances, transactions, and profile workflows.

Selected Projects

Privacy-Preserving AI Email Client (Graduate Capstone)

- Built a Dockerized full-stack prototype with a **Python/FastAPI service and React/TypeScript client**, MinIO storage, Prometheus diagnostics, and separated application and model workflows.

Interactive Portfolio System

github.com/preferablehuman/portfolio

- Built and deployed a **React/TypeScript** SPA with responsive navigation, searchable skill evidence, deep-link fallback, and automated GitHub Actions delivery.

Education

Central Michigan University, Mount Pleasant, MI, USA

Aug 2024 - Dec 2025

Master of Science in Computer Science, GPA: 3.87/4.0

Lovely Professional University, Punjab, India

Aug 2016 - May 2020

Bachelor of Technology in Computer Science and Engineering, CGPA: 8.02/10

Reactivate Your Career Program - Motivational Responses

1. What interests you about joining the Reactivate Your Career Program and why now?

After 4.6+ years in enterprise application development, I took a career break in August 2024 to complete my MS in Computer Science and broaden my skills through full-stack, cloud, and AI projects. Having completed the degree in December 2025, I am ready to return to a production engineering environment. Citi's structured induction, supportive cohort, and tailored development program would help me reconnect my established Java experience with recent learning while rebuilding momentum thoughtfully and contributing from a strong technical foundation.

2. Why have you chosen to apply to Citi?

Citi combines the scale and engineering rigor of a global financial institution with an explicit commitment to helping experienced professionals return successfully. I am drawn to environments where reliability, security, accountability, and collaboration materially affect customers. My background supporting high-availability enterprise services, complex integrations, database-backed workflows, testing, and controlled releases aligns with that responsibility. I also value the opportunity to learn Citi's financial domain, engineering standards, and risk-aware delivery practices while contributing practical Java and application-development experience.

3. What makes you interested in a technology role in Financial Services?

Financial-services technology turns complex business rules into systems that must remain accurate, secure, available, and understandable. That combination is compelling to me. In healthcare and automotive products, I learned to trace behavior across APIs, databases, messaging, external dependencies, and user workflows without losing sight of the governing business rules. I want to apply that systems mindset to transaction-oriented financial applications, where careful engineering can improve trust, operational resilience, and customer outcomes at significant scale.

4. What personal goals would you like to achieve during the course of the program?

My first goal is to re-establish a consistent production-delivery rhythm and become effective within Citi's application landscape, controls, and team practices. I want to deepen my Java full-stack capability, strengthen my financial-services domain knowledge, and learn how Citi applies secure engineering and AI-assisted development responsibly. I also hope to build trusted relationships across technical and business teams, contribute useful code and documentation early, and leave the program positioned for sustained growth and ownership in a long-term application-development role.
