Summary

Mid-Level Java Backend Engineer with 4.6+ years developing and supporting business-critical enterprise services across healthcare and automotive systems, including integrations handling **50K+ daily requests at 99.99% SLA availability**.

Delivery scope: Carries Java, Spring, and Java EE service changes through requirements, REST/SOAP and messaging integration, SQL/JDBC data access, testing, release validation, and production support.

Engineering approach: Preserves security and authoritative business-rule boundaries while improving API performance, reliability, logging, request correlation, database access, and cross-system troubleshooting.

Working style: Independently owns contained technical initiatives and collaborates with engineering, QA, database, deployment, vendor, and business-facing teams; documents repeatable solutions, reviews code, and mentors developers.

Technical Skills

Java Backend & APIs: Java 8/11, Spring Framework, Spring MVC, Java EE/J2EE, EJB, JSF, REST/SOAP APIs, JAX-WS, SOA/service integration, Hibernate/HQL, JDBC/OJDBC.

Identity Workflow Evidence: Authentication, email/OTP login, user profiles, account and transaction workflows (training applications); certificate-authenticated API gateway boundary integration (professional).

Databases & Messaging: SQL, Oracle, DB2; PostgreSQL (training/project); JMS, Azure Service Bus, Azure Relay, Azure Functions.

Application Servers & Delivery: IBM WebSphere, Oracle WebLogic; Maven, Jenkins, GitLab CI/CD, IBM UrbanCode, Git; release configuration, smoke/business checks, go/no-go and rollback recommendations.

Testing & Operations: JUnit/JUnit4, integration testing, SoapUI, Postman, Log4j2, correlation IDs, API and server logs, production support, incident investigation, root-cause analysis, technical documentation, code reviews.

Work Experience

NTT Data, Bengaluru, India

Software Developer, Aug 2022 - Aug 2024

- Developed and maintained **Java 8/11, JAX-WS/Spring, and REST/SOAP APIs** for healthcare payer integrations on IBM WebSphere, supporting **50K+ daily requests at 99.99% SLA availability**.
- Integrated Java services within a certificate-authenticated API gateway boundary, applying member/provider rules and validating REST, XML, and database interactions while the platform team managed gateway authentication.
- Integrated distributed service flows across **Azure Relay, Azure Service Bus, Azure Functions, and JMS**, synchronous HTTP dependencies, and Oracle/OJDBC processing with explicit timeout and partial-failure handling.
- Integrated Java services with Oracle through JDBC/OJDBC, consuming established views and PL/SQL procedures while retaining business validation in the application layer.
- Investigated production issues across Java services, WebSphere, messaging, Oracle records, request correlation IDs, and downstream API traces; coordinated mitigation and validation with specialist teams and vendors.
- **Led a project-wide Log4j2 migration**, owning the initial PoC, preserving logging contracts, documenting a repeatable upgrade path, and reviewing the team rollout.
- Integrated an AOP-based monitoring library that captured **latency, success/failure, and request-volume telemetry**; supported JUnit/SoapUI validation and Maven/Jenkins/UrbanCode release workflows.
- Prepared release artifacts and documentation, performed post-release smoke and business checks, and provided go/no-go or rollback recommendations within deployment-team-controlled production processes.

Capgemini, Mumbai, India

Senior Analyst, Jul 2020 - Aug 2022

- Developed and maintained a **Java EE/J2EE, EJB, JSF, Hibernate/HQL** enterprise application on Oracle WebLogic with DB2 for Mercedes/Daimler Vans configuration, recommendation, and ordering workflows.
- Integrated a Python vehicle-configuration prediction workflow with Java services, then enforced deterministic option and package validation before recommendations reached dealer users.
- **Reduced VIN repeat-configuration API latency from approximately 60+ seconds to 10–20 seconds** by moving stable option-code mapping into set-based HQL/DB2 expressions while retaining business validation in Java.
- Diagnosed incidents across external service output, Java validation logs, API traces, and DB2 reference data; used Postman and production logs to verify correctness and performance.
- Supported Maven, Jenkins/GitLab CI/CD, JUnit4 testing, release support, Git-based code reviews, and production troubleshooting for the enterprise application.
- **Mentored junior developers** through application and business-flow walkthroughs, incremental defects and features, debugging support, and code reviews.

Capgemini, Mumbai, India

Analyst Trainee, Jan 2020 - Jun 2020

- Built Java Spring/Spring MVC, Angular, and **PostgreSQL** modules for fitness-club and digital-wallet applications, implementing authentication, email/OTP login, CRUD, account balances, transactions, and user-profile workflows.
- Validated authentication and transaction flows through feature testing, code reviews, and Agile delivery within the structured training program.

Selected Project

AWS Automated Spark Pipeline

github.com/preferablehuman/AWS-automated-spark-pipeline

- Built an event-driven AWS pipeline using S3, Lambda, EFS, an ECS-hosted Docker workload, and **RDS PostgreSQL/JDBC**; provisioned network, IAM, security-group, and CloudWatch resources with Terraform for an **8GB+ dataset**.

Education

Central Michigan University, Mount Pleasant, MI, USA

Aug 2024 - Dec 2025

Master of Science in Computer Science, GPA: 3.87/4.0

Lovely Professional University, Punjab, India

Aug 2016 - May 2020

Bachelor of Technology in Computer Science and Engineering, CGPA: 8.02/10

Certifications

Microsoft Certified: Azure Fundamentals | Azure Developer Associate | Azure Data Engineer Associate
