Summary

Senior Java Backend / Application Developer with 4.6+ years building and maintaining enterprise healthcare integrations and **automotive configuration, recommendation, and ordering workflows**, with relevant experience in configurable business rules and production systems.

Delivery scope: Takes backend changes from requirement clarification and design through Java/Spring and REST/SOAP implementation, SQL/Hibernate integration, unit/API testing, CI/CD validation, release support, and production troubleshooting.

Engineering approach: Builds maintainable services by preserving authoritative business rules, tracing behavior across application, database, messaging, and downstream boundaries, and applying performance analysis, observability, failure handling, and automated validation.

Working style: Partners with engineering, QA, database, deployment, vendor, and business-facing teams; communicates release risks, reviews code, documents repeatable solutions, mentors developers, and uses AI assistance on projects with human validation and ownership of outputs.

Technical Skills

Languages & Design: Java 8/11, SQL, Python; object-oriented development and design patterns in Java enterprise applications.

Backend & APIs: Spring Framework, Spring MVC, **Spring Boot (knowledge)**, REST/SOAP APIs, JAX-WS, Java EE/J2EE, EJB, JSF, Hibernate/HQL, JDBC/OJDBC, SOA/service-based architecture.

Data & Messaging: Oracle, DB2, PostgreSQL; SQL/HQL query optimization, service-layer business rules; JMS queues, Azure Service Bus Topics, Azure Relay, Azure Functions.

Cloud & Containers: Microsoft Azure; AWS S3, Lambda, EFS, ECS, RDS, CloudWatch, IAM, VPC, Terraform, and Docker (projects).

Delivery, Testing & Operations: Git, Jenkins, Maven, GitLab CI/CD, IBM UrbanCode, GitHub Actions; JUnit/JUnit4, integration testing, SoapUI, Postman, Log4j2, observability, production support, root-cause analysis, Agile/Scrum.

AI-Assisted Engineering: Project-based AI-assisted implementation and review with human validation of generated code, tests, documentation, and technical outputs.

Work Experience

NTT Data, Bengaluru, India

Software Developer, Aug 2022 - Aug 2024

- Developed, tested, and maintained **Java 8/11, JAX-WS/Spring, and REST/SOAP** healthcare integration services on IBM WebSphere, supporting **50K+ daily requests at 99.99% SLA availability**.
- Integrated service flows across **Azure Service Bus Topics, JMS queues, Azure Functions, and Azure Relay**, downstream REST services, and Oracle/OJDBC processing with explicit timeout and partial-failure handling.
- Integrated Oracle views and PL/SQL procedures through OJDBC while applying configurable service-layer member/provider rules for reusable healthcare data workflows.
- **Led a project-wide Log4j2 migration**, owning the PoC, preserving production logging contracts, documenting a repeatable upgrade path, and reviewing the team rollout.
- Integrated AOP-based monitoring that propagated correlation IDs and captured **latency, success/failure, and request-volume telemetry** across services.
- Coordinated with engineering, QA, database, deployment, vendor, and business-facing teams to clarify changes and risks; supported Git/Jenkins/Maven/UrbanCode delivery, JUnit/SoapUI validation, post-release checks, and go/no-go/rollback recommendations.
- Supported root-cause analysis of a **WebSphere memory/resource-retention incident**, contributing code-path review, mitigation strategy, and rolling-restart validation while maintaining operational stability.

Capgemini, Mumbai, India

Senior Analyst, Jul 2020 - Aug 2022

- Developed and maintained a Java EE/J2EE, EJB, JSF, Hibernate/HQL product on Oracle WebLogic and DB2 for **Mercedes/Daimler Vans configuration, recommendation, and ordering workflows**.
- Integrated a Python vehicle-configuration prediction workflow with Java services, then enforced configurable option/package rules before recommendations reached dealer users.
- **Reduced VIN repeat-configuration API latency from 60+ seconds to 10–20 seconds** by moving stable mappings into set-based HQL/DB2 CASE expressions while retaining authoritative validation in Java.
- Diagnosed defects across Python outputs, Java logs, and DB2 data; used Postman and production logs for performance verification and contributed Git-based reviews, JUnit4 tests, Jenkins/GitLab CI/CD, releases, and production support.
- **Mentored junior developers** through codebase walkthroughs, incremental defects and features, debugging, object-oriented design guidance, documentation, and code reviews.

Capgemini, Mumbai, India

Analyst Trainee, Jan 2020 - Jun 2020

- Built Java Spring/Spring MVC, Angular, and PostgreSQL modules for fitness-club and digital-wallet applications, implementing authentication, CRUD, balances, transactions, and profile workflows.

Projects

AWS Automated Spark Pipeline

github.com/preferablehuman/AWS-automated-spark-pipeline

- Built an event-driven AWS pipeline where S3 uploads trigger Lambda staging to EFS, a **Docker-packaged Spark Structured Streaming workload runs on ECS**, and transformed data persists to RDS PostgreSQL over JDBC.
- Provisioned VPC, IAM, S3, Lambda, EFS, ECS, RDS, security groups, and CloudWatch with Terraform; processed an 8GB+ dataset with checkpoints for restart recovery.

Interactive Portfolio System

github.com/preferablehuman/portfolio

- Built and deployed a React/TypeScript application through GitHub Actions and Pages, using **AI-assisted development with human review** to implement, debug, document, and validate product features while retaining accountability for outputs.

Education

Central Michigan University, Mount Pleasant, MI, USA

Aug 2024 - Dec 2025

Master of Science in Computer Science, GPA: 3.87/4.0

Lovely Professional University, Punjab, India

Aug 2016 - May 2020

Bachelor of Technology in Computer Science and Engineering, CGPA: 8.02/10

Certifications

Microsoft Certified: Azure Fundamentals | Azure Developer Associate | Azure Data Engineer Associate
