Summary

Java/J2EE Application Developer with 4.6+ years building and maintaining enterprise systems across **healthcare payer integrations** and **automotive configuration and ordering products**.

Delivery scope: Translates business and integration requirements into Java/J2EE services, database-backed workflows, and REST/SOAP interfaces, carrying changes through coding, unit and integration testing, CI/CD validation, release support, and production maintenance.

Engineering approach: Applies Core Java, OOP, concurrency fundamentals, Spring, Hibernate, JDBC, SQL, JMS, and structured debugging to improve performance and reliability across application-server, database, messaging, XML, and downstream boundaries.

Working style: Partners with engineering, business-facing, QA, database, deployment, and vendor teams; communicates technical trade-offs, documents repeatable solutions, reviews code, mentors developers, and adapts priorities around client and production needs.

Technical Skills

Java/J2EE: Java 8/11, Core Java (Collections, Streams, Lambdas, Concurrency/Multithreading), Java EE/J2EE, EJB, Spring Boot, Spring Framework/MVC, Hibernate/HQL, JPA, JDBC/OJDBC, JSF, OOP, Design Patterns.

Web Services & Messaging: REST/SOAP Web Services, JAX-WS, WSDL, XML/JSON, SOA, JMS, Azure Service Bus, Azure Relay, Azure Functions.

Databases & Platforms: ANSI SQL, Oracle, DB2, PostgreSQL; IBM WebSphere, Oracle WebLogic; Linux; Docker and Kubernetes (project/knowledge).

Build, Delivery & Testing: Maven, Jenkins, GitLab CI/CD, IBM UrbanCode, Git, SVN, GitHub Actions; JUnit/JUnit4, Mockito, Integration Testing, SoapUI, Postman, Log4j2.

Engineering Practices: Agile/Scrum, Jira, Confluence, Production Support, Application Maintenance, Performance Tuning, Root-Cause Analysis, Technical Documentation, Code Reviews, Mentoring.

Work Experience

NTT Data, Bengaluru, India

Software Developer, Aug 2022 - Aug 2024

- Developed and maintained **Java 8/11, JAX-WS/Spring, and REST/SOAP** healthcare integration services on IBM WebSphere, supporting **50K+ daily requests at 99.99% SLA availability**.
- Integrated hybrid service flows across **JMS, Azure Service Bus, Azure Relay, and Azure Functions**, synchronous downstream REST calls, XML/JSON processing, and Oracle/OJDBC access with explicit timeout and partial-failure handling.
- Integrated Java services with **Oracle through JDBC/OJDBC**, consuming established views and PL/SQL procedures while applying service-layer member and provider business rules.
- **Led a project-wide Log4j2 migration**, owning the initial PoC, preserving production logging contracts, documenting a repeatable upgrade path, and reviewing the team rollout.
- Integrated an AOP-based monitoring library that propagated correlation IDs and captured **latency, success/failure, and request-volume telemetry** across services.
- Supported Maven/Jenkins/IBM UrbanCode delivery, JUnit/SoapUI validation, post-release smoke and business checks, production incident analysis, and go/no-go or rollback recommendations.
- Contributed to root-cause analysis of a WebSphere memory/resource-retention incident through code-path review, mitigation planning, and rolling-restart validation while service availability was maintained.

Capgemini, Mumbai, India

Senior Analyst, Jul 2020 - Aug 2022

- Developed and maintained a **Java EE/J2EE, EJB, JSF, Hibernate/HQL** enterprise application on Oracle WebLogic with DB2 for Mercedes/Daimler Vans configuration, recommendation, and ordering workflows.
- Integrated a Python vehicle-configuration prediction workflow with Java services, then enforced deterministic option and package validation before recommendations were exposed to dealer users.
- **Reduced VIN repeat-configuration API latency from 60+ seconds to 10–20 seconds** by moving stable option-code mapping from Java into set-based HQL/DB2 CASE expressions while retaining business validation in Java.
- Diagnosed cross-system defects across Python output, Java validation logs, and DB2 reference data; supported Maven, Jenkins/GitLab CI/CD, JUnit4, Postman testing, and production debugging.
- Performed code reviews and **mentored junior developers** through codebase walkthroughs, contained defects and features, debugging support, testing, and delivery guidance.

Capgemini, Mumbai, India

Analyst Trainee, Jan 2020 - Jun 2020

- Built Java Spring/Spring MVC, Angular, and PostgreSQL modules for fitness-club and **digital-wallet applications**, implementing authentication, email/OTP login, CRUD, account balances, transactions, and profile workflows.

Selected Projects

AWS Automated Spark Pipeline

github.com/preferablehuman/AWS-automated-spark-pipeline

- Built an event-driven pipeline using S3, Lambda, EFS, Spark Structured Streaming in an **ECS-hosted Docker container**, and RDS PostgreSQL/JDBC; provisioned infrastructure with Terraform and processed an **8GB+ dataset**.

Privacy-Preserving AI Email Client (Graduate Capstone)

- Built an LLM-powered email summarization and classification system with a Dockerized FastAPI model service, PyTorch, Hugging Face Transformers, T5, PEFT/LoRA, MinIO, Prometheus, React, and TypeScript.

Education

Central Michigan University, Mount Pleasant, MI, USA

Aug 2024 - Dec 2025

Master of Science in Computer Science, GPA: 3.87/4.0

Lovely Professional University, Punjab, India

Aug 2016 - May 2020

Bachelor of Technology in Computer Science and Engineering, CGPA: 8.02/10

Certifications

Microsoft Certified: Azure Fundamentals | Azure Developer Associate | Azure Data Engineer Associate
