Summary

Java Backend Engineer with 4.6+ years building and modernizing high-availability enterprise systems across **healthcare payer integrations** and **automotive configuration and recommendation products**.

Delivery scope: Takes backend changes from requirements and technical analysis through Java/Spring implementation, API/database integration, testing, CI/CD release validation, monitoring, and production support.

Engineering approach: Improves throughput, latency, reliability, and observability by tracing behavior across application, storage, messaging, and downstream boundaries; applies set-based query processing, explicit failure handling, and operational telemetry.

Working style: Collaborates with technical leads, business-facing teams, QA, database, deployment, and vendors; communicates trade-offs, performs technical deep dives and code reviews, documents decisions, and mentors developers.

Technical Skills

Languages & Backend: Java 8/11, Core Java, Python, SQL; Spring Boot, Spring Framework/MVC, Java EE/J2EE, EJB, JSF, REST/SOAP APIs, JAX-WS, Hibernate/HQL, JPA, JDBC/OJDBC.

Distributed Integration & Data: SOA, JMS, Azure Service Bus/Relay/Functions, Kafka (hands-on project); Oracle, DB2, PostgreSQL, database-side set processing, query optimization, consistency-preserving business validation.

AWS/Cloud Projects: AWS S3, Lambda, EFS, ECS, RDS, CloudWatch, IAM, VPC; Docker, Terraform, event-driven ingestion, Spark Structured Streaming, restart checkpoints; Azure.

Quality & Delivery: JUnit/JUnit4, Mockito, Integration Testing, SoapUI, Postman, Code Reviews; Jenkins, Maven, IBM UrbanCode, GitLab CI/CD, GitHub Actions, Git, SVN.

Operational Excellence: Performance Tuning, Incident Investigation, Root-Cause Analysis, Log4j2, correlation IDs, latency/success/volume telemetry, timeout and partial-failure handling, Agile/Scrum, mentoring.

Work Experience

NTT Data, Bengaluru, India

Software Developer, Aug 2022 - Aug 2024

- Developed and maintained **Java 8/11, JAX-WS/Spring, and REST/SOAP** healthcare integration services on IBM WebSphere, supporting **50K+ daily requests at 99.99% SLA availability**.
- Integrated hybrid service flows across **Azure Service Bus, Azure Relay, Azure Functions, JMS, and REST**, with explicit timeout and partial-failure handling across synchronous downstream dependencies.
- Integrated an AOP-based monitoring library that propagated correlation IDs and captured **latency, success/failure, and request-volume telemetry** across services.
- Supported root-cause analysis of a **WebSphere memory/resource-retention incident**, contributing code-path review, mitigation strategy, and rolling-restart validation while maintaining availability.
- **Led a project-wide Log4j2 migration**, owning the initial PoC, preserving production logging contracts, documenting a repeatable upgrade path, and reviewing the team rollout.
- Troubleshooted production failures across Java services, Oracle/OJDBC processing, and downstream integrations using logs, correlation IDs, JUnit/SoapUI validation, and root-cause analysis.
- Collaborated with testing, deployment, database, vendor, and client-facing teams; supported Jenkins/Maven/UrbanCode releases, smoke checks, and go/no-go/rollback recommendations.

Capgemini, Mumbai, India

Senior Analyst, Jul 2020 - Aug 2022

- Developed and supported a Java EE/J2EE, JSF, Hibernate/HQL application on Oracle WebLogic with DB2 for Mercedes/Daimler Vans configuration and recommendation workflows.
- **Reduced VIN API latency from 60+ seconds to 10-20 seconds** by moving stable mappings into set-based HQL/DB2 CASE processing while retaining authoritative business validation in Java.

- Integrated a Python prediction workflow with Java services, then enforced deterministic option/package validation before recommendations reached dealer users.
- Diagnosed cross-system failures across Python output, Java validation logs, and DB2 reference data; supported Jenkins/GitLab CI/CD, JUnit4 testing, code reviews, and production fixes.
- **Mentored junior developers** through codebase and business-flow deep dives, incremental features and defects, debugging support, and code reviews.

Capgemini, Mumbai, India

Analyst Trainee, Jan 2020 - Jun 2020

- Built Java Spring/Spring MVC, Angular, and PostgreSQL modules for fitness-club and digital-wallet applications, implementing authentication, CRUD, transactions, and profile workflows.

Projects

AWS Automated Spark Pipeline / NYU Taxi Platform

GitHub

- Built an **event-driven AWS pipeline** where S3 uploads trigger Lambda staging to EFS, Spark Structured Streaming processes files in an ECS-hosted Docker container, and results persist to RDS PostgreSQL over JDBC.
- Provisioned VPC/subnets/NAT, IAM, S3 notifications, Lambda, EFS, ECS, RDS, security groups, and CloudWatch resources with Terraform; processed an **8GB+ dataset** with EFS checkpoints for restart recovery.

Privacy-Preserving AI Email Client (Graduate Capstone)

- Built a Dockerized FastAPI model service using Python, PyTorch, and Hugging Face Transformers, with MinIO, Prometheus, React, and TypeScript.

Education

Central Michigan University, Mount Pleasant, MI, USA

Aug 2024 - Dec 2025

Master of Science in Computer Science, GPA: 3.87/4.0

Lovely Professional University, Punjab, India

Aug 2016 - May 2020

Bachelor of Technology in Computer Science and Engineering, CGPA: 8.02/10

Certifications

Microsoft Certified: Azure Fundamentals | Azure Developer Associate | Azure Data Engineer Associate
