Summary

Java Backend / Application Developer with 4.6+ years building and modernizing enterprise systems across **regulated healthcare payer integrations** and **automotive business-rule and recommendation workflows**.

Delivery scope: Translates business and integration requirements into Java/Spring services, REST/SOAP APIs, workflow logic, relational-data processing, automated validation, CI/CD release readiness, and production support.

Engineering approach: Builds maintainable applications using OOP and layered design; improves performance, security posture, reliability, and observability through query redesign, dependency modernization, failure handling, and root-cause analysis.

Working style: Collaborates with product/client-facing, architecture, engineering, QA, database, DevOps/deployment, and vendor teams; documents decisions, reviews code, shares knowledge, and mentors developers.

Technical Skills

Java Application Development: Java 8/11, Core Java, OOP, Design Patterns, Spring Boot, Spring Framework/MVC, Java EE/J2EE, EJB, JSF, layered application architecture.

APIs, Workflows & Integration: REST/SOAP APIs, JAX-WS, SOA, JMS, Azure Service Bus/Relay/Functions, healthcare member/provider business rules, automotive configuration and recommendation workflows.

Data & Persistence: Oracle, DB2, PostgreSQL, SQL, Hibernate/HQL, JPA, JDBC/OJDBC, PL/SQL procedure/view integration, query and database-access performance tuning.

Quality, Security & Operations: JUnit/JUnit4, Mockito, Integration Testing, SoapUI, Postman, Code Reviews, Log4j2 modernization, regulated-data context, Production Support, Incident Investigation, Root-Cause Analysis, correlation-ID observability.

SDLC & Delivery: Agile/Scrum, Jira, Confluence, Jenkins, Maven, IBM UrbanCode, GitLab CI/CD, GitHub Actions, Git, SVN, release validation, technical documentation, mentoring.

Work Experience

NTT Data, Bengaluru, India

Software Developer, Aug 2022 - Aug 2024

- Developed, tested, and maintained **Java 8/11, JAX-WS/Spring, and REST/SOAP** healthcare payer services in a client-governed regulated-data environment, supporting **50K+ daily requests at 99.99% SLA availability**.
- Integrated Java services with **Oracle through OJDBC**, consuming established views and PL/SQL procedures while applying member/provider business rules and dependent-data decisions in the service layer.
- Integrated hybrid service flows across Azure Relay, Azure Service Bus, Azure Functions, JMS, and REST, with explicit timeout and partial-failure handling across downstream dependencies.
- **Led a project-wide Log4j2 modernization** following client security review, owning the PoC, preserving production logging contracts, documenting the migration, and reviewing the team rollout.
- Integrated an AOP-based monitoring library that propagated correlation IDs and captured **latency, success/failure, and request-volume telemetry** across services.
- Supported root-cause analysis of a **WebSphere memory/resource-retention incident**, contributing code-path review, mitigation strategy, and rolling-restart validation while maintaining availability.
- Supported JUnit/SoapUI validation and Jenkins/Maven/UrbanCode release workflows; performed post-release smoke/business checks and contributed go/no-go/rollback recommendations.
- Collaborated with client-facing, architecture, QA, database, deployment, and vendor teams to clarify end-to-end requirements, resolve integration issues, and document sustainable implementation paths.

Capgemini, Mumbai, India

Senior Analyst, Jul 2020 - Aug 2022

- Developed and supported a layered Java EE/J2EE, JSF, Hibernate/HQL application on Oracle WebLogic with DB2 for Mercedes/Daimler Vans configuration, recommendation, and ordering workflows.
- **Reduced VIN workflow API latency from 60+ seconds to 10–20 seconds** by moving stable mappings into set-based HQL/DB2 CASE processing while retaining authoritative business validation in Java.
- Integrated a Python prediction workflow with Java services and enforced deterministic mandatory, package, expiry, and incompatibility rules before recommendations reached dealer users.
- Diagnosed production scenarios across Python output, Java validation logs, and DB2 reference data; supported Jenkins/GitLab CI/CD, JUnit4 testing, code reviews, and production fixes.
- **Mentored junior developers** through codebase and business-workflow walkthroughs, incremental features and defects, debugging support, and code reviews.

Capgemini, Mumbai, India

Analyst Trainee, Jan 2020 - Jun 2020

- Built Java Spring/Spring MVC, Angular, and PostgreSQL modules for fitness-club and digital-wallet applications, implementing authentication, CRUD, account balances, transactions, and profile workflows.

Projects

AWS Automated Spark Pipeline / NYU Taxi Platform

GitHub

- Built an event-driven AWS pipeline using S3, Lambda, EFS, Spark Structured Streaming in an ECS-hosted Docker container, and RDS PostgreSQL; provisioned infrastructure with Terraform and processed an **8GB+ dataset**.

Education

Central Michigan University, Mount Pleasant, MI, USA

Aug 2024 - Dec 2025

Master of Science in Computer Science, GPA: 3.87/4.0

Lovely Professional University, Punjab, India

Aug 2016 - May 2020

Bachelor of Technology in Computer Science and Engineering, CGPA: 8.02/10

Certifications

Microsoft Certified: Azure Fundamentals | Azure Developer Associate | Azure Data Engineer Associate
