Summary

Java/J2EE Software Engineer with 4.6+ years delivering high-availability enterprise systems across **healthcare payer integrations** and **automotive configuration, recommendation, and ordering products**.

Delivery scope: Independently translates requirements and acceptance criteria into Java/Spring components, REST/SOAP services, database-backed workflows, and test scenarios, carrying changes through coding, CI/CD validation, release support, and production maintenance.

Engineering approach: Applies OOP, SOLID principles, design patterns, layered service and persistence boundaries, and evidence-led performance tuning to produce reusable, maintainable code and troubleshoot behavior across APIs, SQL, messaging, and application servers.

Working style: Collaborates across geographically distributed engineering, QA, database, deployment, vendor, and client-facing teams; communicates trade-offs, documents repeatable solutions, reviews code, mentors developers, and delivers against Agile priorities.

Technical Skills

Java & Backend: Java 8/11, Core Java, Spring Boot, Spring Framework/MVC, Java EE/J2EE, EJB, REST/SOAP APIs, JAX-WS, Hibernate/HQL, JPA, JDBC/OJDBC, OOP, SOLID principles, Design Patterns.

Services & Integration: REST APIs, SOAP Web Services, JAX-WS, XML/JSON, JMS, Azure Service Bus/Relay/Functions; IBM WebSphere, Oracle WebLogic; external and third-party integrations.

Databases & Persistence: SQL, Oracle, DB2, PostgreSQL; Hibernate/HQL, JPA, JDBC/OJDBC, ORM, query and API performance tuning.

Testing, DevOps & Delivery: JUnit/JUnit4, Mockito, Integration Testing, SoapUI, Postman; Maven, Jenkins, GitLab CI/CD, GitHub Actions, IBM UrbanCode, Git, SVN; Agile/Scrum, Jira, Confluence.

Cloud & Operations: Microsoft Azure, AWS, Docker, Terraform; Kubernetes (knowledge); High Availability, L2/L3-style Production Support, Root-Cause Analysis, Debugging, Log4j2, Observability, Technical Documentation, Code Reviews, Mentoring.

Work Experience

NTT Data, Bengaluru, India

Software Developer, Aug 2022 - Aug 2024

- Developed, tested, and maintained **Java 8/11, JAX-WS/Spring, and REST/SOAP** healthcare integration services on IBM WebSphere, supporting **50K+ daily requests at 99.99% SLA availability**.
- Integrated enterprise service flows across **Azure Relay, Azure Service Bus, Azure Functions, and JMS**, synchronous downstream REST calls, XML/JSON processing, and Oracle/OJDBC access with explicit timeout and partial-failure handling.
- Integrated Java services with **Oracle through JDBC/OJDBC**, consuming established views and PL/SQL procedures while applying service-layer member and provider business rules.
- **Led a project-wide Log4j2 migration**, owning the initial PoC, preserving production logging contracts, documenting a repeatable upgrade path, and reviewing the team rollout.
- Integrated an AOP-based monitoring library that propagated correlation IDs and captured **latency, success/failure, and request-volume telemetry** across services.
- Performed L2/L3-style production investigation across Java, REST, Jackson/XML, WebSphere, and downstream dependencies; contributed root-cause analysis, mitigation planning, and rolling-restart validation while maintaining availability.
- Supported Maven/Jenkins/IBM UrbanCode delivery, JUnit/SoapUI testing, release documentation, post-release checks, and go/no-go or rollback recommendations.

Capgemini, Mumbai, India

Senior Analyst, Jul 2020 - Aug 2022

- Developed and maintained a **Java EE/J2EE, EJB, JSF/AJAX, Hibernate/HQL** enterprise application on Oracle WebLogic with DB2 for Mercedes/Daimler Vans configuration, recommendation, and ordering workflows.
- Integrated an asynchronous Python vehicle-configuration prediction workflow with Java services and callbacks, then enforced deterministic option and package validation before recommendations reached dealer users.
- **Reduced VIN repeat-configuration API latency from 60+ seconds to 10–20 seconds** by moving stable option-code mapping into set-based HQL/DB2 expressions while retaining business validation in Java.
- Diagnosed cross-system defects across Python output, Java validation logs, and DB2 reference data; supported Maven, Jenkins/GitLab CI/CD, JUnit4, Postman, code reviews, and production debugging.
- **Mentored junior developers** through codebase and business-flow walkthroughs, contained defects and features, testing, debugging support, and code reviews.

Capgemini, Mumbai, India

Analyst Trainee, Jan 2020 - Jun 2020

- Built Java Spring/Spring MVC, **Angular**, and PostgreSQL modules for fitness-club and digital-wallet applications, implementing authentication, email/OTP login, CRUD, account balances, transactions, and profile workflows.

Selected Projects

AWS Automated Spark Pipeline

github.com/preferablehuman/AWS-automated-spark-pipeline

- Built an event-driven AWS pipeline using S3, Lambda, EFS, an ECS-hosted **Docker** workload, and RDS PostgreSQL/JDBC; provisioned cloud infrastructure with Terraform and processed an **8GB+ dataset**.

Education

Central Michigan University, Mount Pleasant, MI, USA

Aug 2024 - Dec 2025

Master of Science in Computer Science, GPA: 3.87/4.0

Lovely Professional University, Punjab, India

Aug 2016 - May 2020

Bachelor of Technology in Computer Science and Engineering, CGPA: 8.02/10

Certifications

Microsoft Certified: Azure Fundamentals | Azure Developer Associate | Azure Data Engineer Associate
